

SH

Roland SH-101 Drum Samples
+ Ableton Drum Rack

GETTING STARTED GUIDE

I was bored. There was an SH-101. This is that story.

The SH-101 is a classic bass synthesizer made popular in acid genres like Acid House or Acid Techno. It's got a great, warm, analogue sound and the particular unit I sampled was quite gritty which you can hear in the samples.

The SH-101 does not normally make drum sounds but I set about synthesising a few and the good ones made it here. I did 4 round robins for each sample and have set those samples up in an Ableton Drum Rack.

This is definitely not your standard drum kit but the sounds are really gritty and analogue and work great as percussive additions to any other kit.

INSTALLATION

Installing the Drum Rack is fairly straightforward. Once downloaded and unzipped you'll have an Ableton Project file in which you should find SH.adg and a Samples folder - you'll need to be sure to keep these 2 together. I'd recommend simply copying the entire Ableton Project to a location on your hard drive where you save all your custom sounds. You can then simply drag the .adg file into a new track in Live.

You can also load the files from directly within Live by choosing 'Add Folder...' from within Live's browser and navigating to the location of the SH Project folder.

If you have any questions or issues please get in touch at elphnt.io/contact

SH is made by Ableton Certified Trainer Tom Glendinning, also known as ELPHNT. For more devices, tutorials and free music production resources visit elphnt.io

Please read the up-to-date **licensing info** for SH at elphnt.io/licensing
